

# Cisco Jabber for Windows: Enterprise Collaboration Made Simple

## Product Overview

The Cisco Jabber® platform is a unified communications application that lets you be more productive from anywhere on a broad array of devices. Find the right people, see if and how they are available, and collaborate using your preferred method.

Today’s global, distributed work environment has resulted in significant challenges for workers, making it harder to connect with the right people and significantly increasing the quantity and modes of communications.

Organizations of all sizes are striving to improve communications in order to retain customers, compete for new business, control costs, and grow their business globally.

Cisco Jabber for Windows streamlines communications and enhances productivity by unifying presence, instant messaging, video, voice, voice messaging, screen sharing, and conferencing capabilities securely into one client on your desktop. Cisco Jabber for Windows delivers highly secure, clear, and reliable communications. It offers flexible deployment models, is built on open standards, and integrates with commonly used desktop applications. You can communicate and collaborate effectively from anywhere you have an Internet connection (Figure 1).

**Figure 1.** Cisco Jabber for Windows

## Features and Benefits

### Reduce Communication Delays with Presence and Contact Information

The Cisco Jabber platform enables you to see the availability of co-workers and colleagues within and outside your organization. You can immediately see who is offline, available, away, on a call, or in a do-not-disturb state. You can create customized availability states, such as "in a customer meeting", to provide added context. Contact cards provide additional contact information and multiple options for initiating communications. These capabilities help reduce communication delays and result in faster decision making and enhanced productivity.

### Quickly Communicate with Borderless Enterprise-Class Instant Messaging

Instant messaging is an important communication option that lets you efficiently interact in today's multitasking business environment. The Cisco Jabber platform delivers enterprise-class instant messaging capabilities that are based on the Extensible Messaging and Presence Protocol (XMPP). The solution provides personal, group chat, and persistent chat rooms so you can quickly connect with your business colleagues. Chat history and server-based logging capabilities allow you to view the content of prior chats and to store messages for convenience, compliance, and regulation purposes. Instant messaging is integrated with other communication capabilities so you can simply move between chats, audio conversations, and web conferences. You can even share presence and send instant messages to people outside your organization who may not be using the Cisco Jabber application. The enterprise-class instant messaging capabilities of the Cisco Jabber platform provide more efficient, highly secure, flexible, and borderless collaboration.

### Bring Business-Class IP Telephony to the Desktop

The Cisco Jabber application delivers business-quality voice and video to your desktop. Powered by the market-leading Cisco® Unified Communications Manager, the Cisco Jabber application is a soft phone with wideband and high-fidelity audio, standards based high-definition video (720p), and desk-phone control features. These features mean that high-quality and high-availability voice and video telephony is available at all locations and to users' desk phones, soft clients, and mobile devices. The Cisco Jabber application makes voice communications simple, clear, and reliable (Figure 2).

**Figure 2.** High-Definition Video with Integrated Audio Controls

## Accelerate Team Performance with Multiparty Conferencing and Collaboration

The Cisco Jabber platform provides for smooth escalation to desktop sharing or Cisco WebEx<sup>®</sup> conferencing and collaboration solutions. You can instantly share documents and expand chats and conversations to multiparty voice, video, and web conferencing.

## Collaborate from Common Business Applications

You can access the capabilities of the Cisco Jabber application from common desktop applications such as Microsoft Outlook, including lighting up presence and click-to-communicate (instant message and audio and video calling) capabilities. With Microsoft Outlook, you can use the Microsoft contact card click-to-communicate icons directly from within the application to save time and streamline workflows because you can view user availability and initiate communications such as personal and group voice, video, and chat sessions without having to switch between applications.

Table 1 outlines features and benefits that apply to Cisco Jabber for Windows Version 10.5.

**Table 1.** Features and Benefits

Feature	Benefit
<b>Communication integration</b>	Use a single, intuitive interface for instant messaging with individuals and groups, IP telephony, visual voicemail, voice and web conferencing, desktop sharing <sup>1</sup> , chat history, and integrated directories.
<b>Presence</b>	View real-time availability of co-workers and colleagues within and outside the enterprise network. <ul style="list-style-type: none"><li>• Exchange and display presence availability information and instant messages with other Cisco Jabber users, Cisco Unified Personal Communicator, Cisco WebEx Connect<sup>®</sup>, Microsoft Lync, IBM Lotus Sametime, AOL, GoogleTalk, and many other XMPP-compatible clients.</li><li>• Exchange presence information with mobile handsets using Cisco Jabber or third-party XMPP-compatible clients.</li><li>• Display customized availability messages.</li><li>• Your status is updated automatically when you are in a Cisco WebEx meeting or sharing an application.</li><li>• Show your availability based on the free and busy status in your Microsoft Outlook Calendar or Exchange Server<sup>2</sup>.</li><li>• Set Alerts to be notified when your contacts become available.</li></ul>
<b>Enterprise instant messaging</b>	Chat in real time using instant messaging to save time and reduce phone tag. Several chat modes are supported, ranging from: <ul style="list-style-type: none"><li>• Point-to-point chat with co-workers inside your network, or supported federated business and personal contacts</li><li>• Group chat, which enables multiple colleagues to communicate and collaborate in a single discussion</li><li>• Chat Rooms, enabling persistent chat among distributed teams<sup>2</sup></li><li>• Personal instant messaging history for your reference</li></ul>
<b>Predictive search</b>	Look up contacts quickly. Predictive search offers you suggestions as you type in a search query and can index your Jabber <sup>®</sup> contact list, recent contacts, and personal Outlook contacts.
<b>Media escalation</b>	Choose the right communication tool for your situation. Escalate from a chat to an audio call, video call, screen share, or web meeting. Media escalations are as easy as clicking a button.
<b>Desktop share</b>	Communicate ideas quickly by instantly sharing what is on your screen. With the Jabber application you can share your screen with other Jabber users as well as Cisco and other standards-based video endpoints. Remotely control another Windows desktop using Jabber for Windows
<b>Integrated voice and video telephony</b>	Exchange ideas face-to-face with coordinated video display on the PC screen and voice conversation with a soft phone. <ul style="list-style-type: none"><li>• Make, receive, and control your phone calls whether you are in or out of the office.</li><li>• Business-quality video communication up to high-definition and high-fidelity wideband audio is supported.</li><li>• Standards-based video means you are not restricted to collaboration with just other Jabber clients. You can use voice, video, and even desktop share when interacting with telepresence endpoints and room-based and multipoint videoconferencing systems.</li><li>• A variety of call-control options are available, including mute, call transfer, call forwarding, and impromptu conferencing.</li><li>• The enterprise-class IP telephony reliability and failover features of Cisco Unified Communications Manager are supported.</li></ul>

Feature	Benefit
<b>Conferencing</b>	<p>Initiate multiparty voice and web meetings.</p> <ul style="list-style-type: none"> <li>Group chat and audio conference sessions are as simple as clicking a button, eliminating the need to use other applications and interfaces to schedule, invite, or join conferences.</li> <li>Initiate a web meeting session directly from the Cisco Jabber client using Cisco WebEx conferencing to share content, such as a presentation, document, or your desktop<sup>1</sup>.</li> </ul>
<b>Chat history</b>	Access a history of your instant messaging conversations.
<b>Visual voice message access</b>	View, play back, and delete voice messages from Cisco Unity® Connection.
<b>Microsoft Outlook integration</b>	<p>See user availability and click to initiate chat sessions or voice and video calls, Save Chat to Outlook folder or launch web collaboration sessions directly from Microsoft Outlook, including:</p> <ul style="list-style-type: none"> <li>Microsoft Outlook 2010</li> <li>Microsoft Outlook 2013</li> <li>Microsoft Outlook 365 (with installed Outlook desktop client)</li> </ul>
<b>Encryption</b>	Encrypt instant messaging communications using up to 256-bit Advanced Encryption Standard (AES) encryption and Transport Layer Security/Secure Sockets Layer (TLS/SSL) connections.
<b>Single Sign-On (SSO)</b>	<p>Single Sign-On allows Cisco Jabber users to securely access all Jabber services without being prompted to log into each of them separately. The Cisco Jabber application uses authentication performed by the corporate Identity Provider. The Identity Provider can control the authentication experience for Cisco Jabber users; for example, by prompting users for their enterprise username and password once when the Cisco Jabber application is first run and by specifying the length of time a user is authorized to use Cisco Jabber services.</p> <p>The Cisco Jabber application uses the Security Assertion Markup Language (SAML), which is an XML-based open standard data format that enables access to a defined set of Cisco services transparently after verifying credentials with an Identity Provider. SAML Single Sign-On can be enabled for Cisco WebEx Messenger Services, Cisco Unified Communications Manager, and Cisco Unity Connection. SSO is deployed for use with Cisco Jabber clients using service discovery.</p>
<b>Enterprise policy management</b>	Set granular policies to determine which features and capabilities your Cisco Jabber end users can or cannot access.
<b>Flexible deployment models</b>	You can deploy Cisco Jabber for Windows on-premises, hybrid, or in the cloud, offering your IT department the flexibility to choose the model that best suits your business.
<b>Virtual environments</b>	<p>You can deploy Cisco Jabber for Windows in virtual environments using Citrix XenDesktop and Citrix XenApp:</p> <ul style="list-style-type: none"> <li>Citrix XenDesktop 7.1 &amp; 7.5, 7.6</li> <li>Citrix XenApp 7.5, 7.6 Enterprise Edition for Windows 2008 R2 64-bit, published desktop</li> <li>VMWare Horizon View 5.2, 5.3 &amp; 6.0</li> </ul>
<b>Localization</b>	Languages supported include: Arabic, Bulgarian, Catalan, Croatian, Czech, Danish, German, Greek, English, Spanish, Finnish, French, Hebrew, Hungarian, Italian, Japanese, Korean, Norwegian, Dutch, Polish, Portuguese (Brazil), Portuguese (Portugal), Romanian, Russian, Serbian, Slovak, Slovenian, Swedish, Thai, and Turkish.

<sup>1</sup> Feature available for on-demand deployment only.

<sup>2</sup> Feature available for on-premises deployment only.

## System Requirements

Table 2 outlines system requirements that apply to Cisco Jabber for Windows Version 9.6.

**Table 2.** System Requirements

<b>Operating system</b>	<ul style="list-style-type: none"> <li>Microsoft Windows 7 and 8.1</li> </ul>
<b>Minimum CPU speed and type</b>	<ul style="list-style-type: none"> <li>Mobile AMD Sempron Processor 3600+ at 2 GHz</li> <li>Intel Core 2 CPU T7400 at 2.16 GHz</li> </ul>
<b>Installed RAM</b>	<ul style="list-style-type: none"> <li>2-GB RAM (Windows 7)</li> </ul>
<b>Free physical memory</b>	<ul style="list-style-type: none"> <li>128 MB</li> </ul>
<b>Disk space</b>	<ul style="list-style-type: none"> <li>256 MB</li> </ul>
<b>Graphics processing</b>	<ul style="list-style-type: none"> <li>DirectX11</li> </ul>
<b>I/O ports</b>	<ul style="list-style-type: none"> <li>When using USB cameras and audio devices, USB 2.0 is required.</li> </ul>

Table 3 outlines system requirements for Cisco Unified Communications.

**Table 3.** Cisco Unified Communications System Requirements

<b>Cisco Unified Communications Manager (Standard and Business Editions)</b>	<ul style="list-style-type: none"> <li>• 8.6(2) or later</li> </ul>
<b>Cisco Unified Presence</b>	<ul style="list-style-type: none"> <li>• 8.6(2) or later</li> </ul>
<b>Contact search services</b>	Cloud-based sources: <ul style="list-style-type: none"> <li>• Cisco WebEx Messenger™ Contact Service</li> </ul> On-premises sources: <ul style="list-style-type: none"> <li>• Active Directory Domain Services for Windows Server 2012 R2</li> <li>• Active Directory Domain Services for Windows Server 2008 R2</li> <li>• OpenLDAP</li> <li>• Active Directory Lightweight Directory Service (AD LDS) or Active Directory Application Mode (ADAM)</li> <li>• Cisco Unified Communications Manager User Data Service (UDS) with Cisco Unified Communications Manager 9.1(2) or later</li> </ul>
<b>Cisco Unified IP Phones (Computer telephony integration [CTI]-enabled)</b>	<ul style="list-style-type: none"> <li>• Cisco Unified IP Phone 9900 Series</li> <li>• Cisco Unified IP Phone 8900 Series</li> <li>• Cisco Unified IP Phone 7900 Series</li> <li>• Cisco Unified IP Phone 6900 Series</li> </ul>
<b>Cisco Conferencing</b>	<ul style="list-style-type: none"> <li>• Cisco TelePresence® MCU 4500 Series</li> <li>• Cisco TelePresence Server 7010</li> <li>• Cisco TelePresence Server 8000</li> <li>• Cisco Unified Videoconferencing 7.0 5115</li> <li>• Cisco WebEx Meeting Center</li> <li>• XML Application Programming Interface (API) 5.8</li> </ul>
<b>Voicemail playback</b>	<ul style="list-style-type: none"> <li>• Cisco Unity Connection 8.6(2) or later</li> </ul>
<b>Cisco Unified Survivable Remote Site Telephony (SRST)</b>	Cisco Jabber for Windows supports the following features with Cisco Unified Survivable Remote Site Telephony (SRST) Version 8.5: <ul style="list-style-type: none"> <li>• Basic call functions</li> <li>• Ability to hold and resume calls</li> </ul> Cisco Jabber for Windows requires an active connection to the presence server to successfully fall back to SRST.

## Warranty Information

Find warranty information on Cisco.com at the [Product Warranties](#) page.

## Ordering Information

Cisco Jabber for Windows is a single client that can connect to either the Cisco Collaboration Cloud or the Cisco Unified Presence Server for IM and Presence. The ordering mechanism will vary based on the deployment model selected.

To order Cisco Jabber for Windows hosted in the Cisco Collaboration Cloud, please review the [WebEx Global Price List](#).

To order Cisco Jabber for Windows deployed on the Cisco Unified Communications Manager Instant Messaging and Presence Server, please visit the [Cisco Ordering Home Page](#).

Cisco Jabber for Windows is a part of Cisco Unified Workspace Licensing. Please visit [http://www.cisco.com/go/workspace\\_licensing](http://www.cisco.com/go/workspace_licensing) for more information and to determine whether Cisco Unified Workspace licensing is appropriate for your organization.
